

STARCRYL

Braided And Coated Polyglycolic Acid

Synthetic Absorbable Surgical Sutures. Coated & Braided Polyglycolic Acid (PGA)

Starcryl is an ideal and time tested synthetic absorbable suture, widely used by surgeons all over the world. PGA's superior features over catgut are predictable absorption, outstanding tensile strength, in-vivo inertness and excellent handling properties.

Braided

For easy handling and secure knot tying.

Coated

Starcryl is coated with non-toxic and bio-compatible material called Polycaprolactone Calcium Stearate which facilitate smooth passage through tissues and firm knotting.

Synthetic

For minimal tissue reaction.

Absorbable

By hydrolysis, Complete between 56 & 70 days, Always predictable and reliable

Tensile Strength

Starcryl tensile strength surpass even the standards set by U.S. Pharmacopoeia and substantially higher than catgut.

Colour

Violet & undyed

Range

Gauge sizes 5/0 to 2 (U.S.P)

Supplied as needled sutures and ligatures.

Sterilisation

Ethylene Oxide

Frequent Applications

General Closure, Gastro-intestinal, Ob-Gyn, Orthopaedics where eventual absorption of Suture is required, Undyed form is specially for Cuticular and Plastic Surgeries.

BRAIDED AND COATED POLYGLYCOLIC ACID SUTURE

EYELESS NEEDLED SUTURES
